PQA820 | MACROTESTG3 | COMBIG2 | HTANALYSIS

Artificial Intelligence.

Thanks to the creation of App HTanalysis it is possible to interface HT last generation instruments with tablets and smartphones. **HTanalysis** is a professional software allowing to display and look at measurements or recordings on your devices then sharing them on HTCloud database.
HTanalysis permits to create professional reports complete with pictures, texts, video and voice notes. Interfacing the instrument with your device's display you can look at a fast and detailed tracking of the recorded quantities on touch-screen.

With PQA820

- It enables you to display **recordings of voltage, current, power, harmonics, THD%, cosphi and frequency**.
- It enables you to display **all waveforms, vector diagrams and harmonics instantly**.
- **It enables you to store all recordings** into **HTCloud** database **sharing** them through **mail** as well.

With MacroTestG3 and CombiG2

- It enables you to create **reports** complete with **pictures, videos, text and voice notes, store** them into **HTCloud** database and share them through **mails**.

Share.
Whenever, whatever and wherever.

HT Cloud™

Install App HTanalysis to avail yourself of **HTCloud** database and **share** measurement results and recordings with your colleagues **from any place on the planet**.

- **One instrument for all electrical safety tests** according to **IEC/EN61557-1.**
- **Advanced Loop.** Testing of MCBs, fuses and cable sizing.
- **Earth resistance** with 2- or 3-pole **volt-ampere method** in TT, TN and IT systems, **non-trip earth loop impedance measurement, stackless earth ground resistance measurement** with T2100 (optional). **Soil resistivity.**
- **Measurement of electrical parameters in single phase installations** (V, A ,W,VAR,VA, PF)

- **RCD testing** type A, AC, B with test current up to 10A.**
- **Insulation resistance** measurement.
- **Continuity** measurement of protective conductors.
- Measurement of **phase sequence (SEQ)** and **leakage currents.**
- **Measurement of environment parameters** through external probes.

* Using HTanalysis App for iOS™ or Android™ on Tablet or Smartphone. The App can be downloaded for free on AppStore™ or Playstore™

** Optional accessory RCDX10 for testing industrial RCDs up to 10A.

RCD **testing**

- Test on **general, selective and delayed RCDs type A, AC up to 1A** and **B up to 300mA.**
- Test on **RCDs with external toroidal transformer and test current up to 10A*.**
- Test mode **x½, x1, x2, x5** and **AUTO** to make **6 test sequences.**
- **Ramp**: measurement of real tripping current.

*with optional accessory RCDX10.

Selection of maximum resistance value

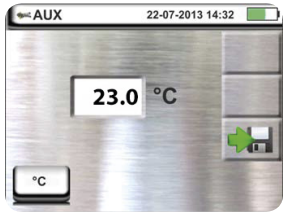
Selection of AUTO or TIMER measuring mode

Measurement of environmental parameters through external probes

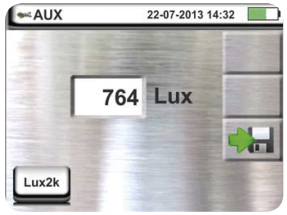
Using external transducer it is possible to measure the following environmental parameters

- **Air temperature** in °C, °F and RH%
- **Air relative humidity**
- **Illuminance** with ranges 20/2k/20kLux

Selection of measurement type



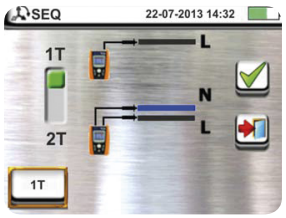
Real time display of temperature measurement

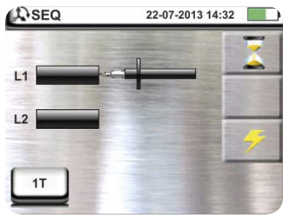


Real time display of LUX measurement

Measurement of phase sequence SEQ

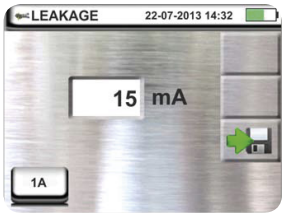
- Check of **phase sequence** with 1 or 2 terminals.
- Check of **phase compliance**.

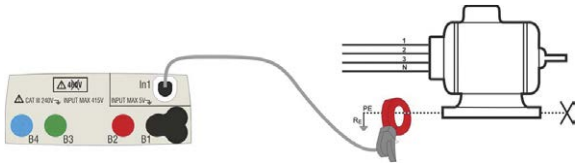




Measurement of leakage currents

Leakage current can be measured with external clamp **HT96U** (optional).





Evolution of saving.

- Virtual keyboard to enter comments.
- Saving on file structure.
- **New detailed reports** with **TopView** software.

HTanalysis™ and HTCloud™

App HTanalysis will change your working concept.

During testing you can:

- Dictate comments orally
- Associate a picture or a video to each measurement
- Review and customize your measurements

HTCloud will enable you to **share your measurements with everybody.**

Advanced Loop

Testing of MCBs, fuses and cable sizing.

For the first time ever.

For the first time you will be able to check whether a complex system is working in compliance with standards. **HT enriched loop measurement** including functions and tests which were earlier possible just thanks to project-oriented calculations.

The rules of the game? We know all the answers.

In order to protect power lines, IEC/EN61557-1 standards require designers to size the installation to grant:

- **protection against indirect contacts**
- **protection against short circuits.**

MacrotestG3 is quite familiar with standards and is capable of directing you in solving any problem.

Just challenge us.

- **STD** Line impedance measurement between L-N, L-L, L-PE and calculation of prospective short circuit current.
- **I²t** Testing of MCB against short circuit thermal effect.
- **kA** Testing of MCB tripping power.
- Testing of MCB against indirect contacts (TT-TN-IT systems).
- Testing of MCB tripping time.

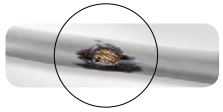
All the a.m. measurements can be also effected with high resolution (0.1mΩ) using IMP57 (optional accessory).

No more guessing.

- **I²t Testing of MCB against short circuit thermal effect.**

  Are cables suitably sized to support short circuit currents? Is MCBs' tripping time short enough to safeguard your cables? MactrotestG3 will direct you in solving those problems. After setting the type of MCB/fuse, of cable section and conductor material you will be advised of line protection according to the following relation:

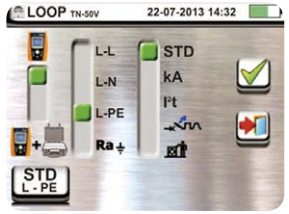
$$I_{cc}^2 \times t \leq K^2 \times S^2$$

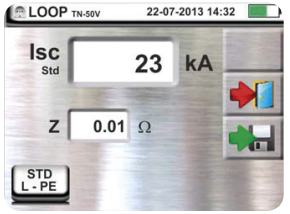


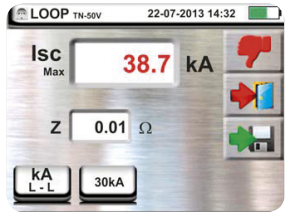
Where, according to standards, K represents the conductor material while S is the cable section.

- **kA Testing of MCB tripping power.**

  Is the short circuit current calculated in every point of the line suitable? If yes your MCB is correctly sized.







Setting of MCB/fuse type and rated current

Selection of material type and conductor section

› **Testing of protection against indirect contacts (TT-TN-IT systems)**

When an earth fault occurs masses can become potentially dangerous as long as protection trips out. The instrument checks that danger does not overcome the limits set by the standards. For example in a TN system after setting the curve type and tripping time of MCB the instrument calculates short circuit current with positive outcome if MCB trips out before contact voltage becomes dangerous.

› **Testing of MCB tripping time.**

If MCBs comply with tripping times provided by the standards the instrument will indicate positive outcome.

Selection of tripping time

Positive outcome of measurements

Earth Resistance

Any kind of installation.

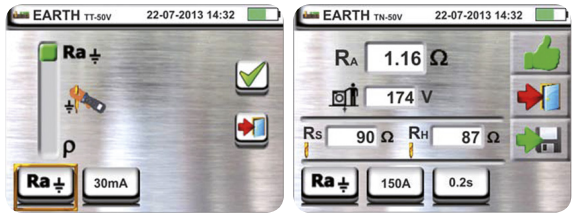
Earth resistance with 2- or 3-pole volt-ampere method in TT, TN and IT systems.

After setting the distribution system (TT, TN, IT) the instrument can check the requisites provided by the standards IEC/EN61557-1 for protection against indirect contacts with positive outcome in case of compliance.

Earth resistance measurement by Volt-ampere method

Watchword: make it easier.

In TN systems after setting maximum earth fault current **Ig** and tripping time for medium voltage protections (data provided by the Electricity Board) the instrument calculates contact voltage **Utp** after measuring earth resistance comparing it with EN50522's data. If outcome is **OK!** the user does not need to carry out step and contact voltage measurement.



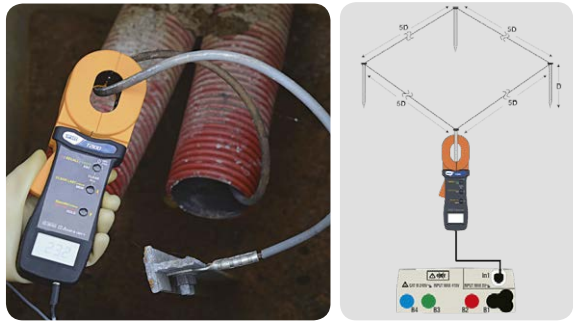
More than one earth.

In addition to volt ampere method other testing modes can be adopted as follows:

› **Stackless earth ground resistance measurement with T2100 (optional)**
MacrotestG3 adopts an innovative method for earth resistance measurement eliminating the worry of finding a place for auxiliary earth rods. Earth resistance measurement will be easier thanks to an algorithm HTEarth storing all measurements effected with clamp T2100 and calculating earth resistance value without disconnecting rods.

› **Non-trip earth loop impedance measurement**
It measures earth resistance and contact voltage without causing protections tripping in systems with neutral and without neutral.

› **Soil resistivity**
It measures soil resistivity (ρ) with 4-pole Wenner method.



Measurement with clamp T2100

Standard accessories

- **KITMPPACW** Set of 4 measuring cables
- **KITMPPACC** Set of 4 alligator clips
- **606-IECN** Adapters with magnetic ends, 4 pcs.
- **HTFLEX33L** 0÷100A, 0÷1000A AC flexible clamp, 174mm, 4 pcs.
- **TOPVIEW2007** PC Windows software + USB cable
- **BORSA2051** Carrying case
- **Quick user's guide**
- **User's manual** on CD-ROM
- **Calibration certificate** ISO9000

Optional accessories

- **HP30C2** Clamp transducer AC 200-2000A/1V, diameter 70mm
- **HT96U** Clamp transducer AC 1-100-1000A/1V, diameter 54mm
- **HT98U** Clamp transducer DC 1000A/1V, diameter 50mm
- **HP30D1** Clamp transducer DC 1000A/1V, diameter 83mm
- **HT903** Box 3 x 1-5A/1V for connection to external CTs
- **ACONBIN** Adapter for clamp transducer

Services d'EURO-INDEX

EURO-INDEX est un fabricant, importateur et distributeur de diverses marques A dans le domaine des instruments de test et de mesure. Nous fournissons également une large gamme de services pour optimiser l'utilisation de ces instruments dans vos activités. Ces services comprennent naturellement l'entretien, la réparation et l'étalonnage des instruments, mais nous proposons aussi une assistance sous forme de formation via notre EURO-INDEX Academy et la location d'instruments.

Centre de Service Agréé

EURO-INDEX est un Centre de Service Agréé pour toutes les marques représentées. Cela signifie que vos instruments sont pris en charge par des techniciens formés par le fabricant et disposant des outils et logiciels adéquats. Seules des pièces d'origine sont utilisées et la garantie de votre instrument, ainsi que les certifications (ATEX, EN50379, etc.) restent intactes.

Laboratoire de maintenance et de calibrage

Le laboratoire des Pays-Bas est accrédité RvA selon la norme EN-ISO/IEC 17025. Cette accréditation est valable pour différentes grandeurs, telles que spécifiées dans le champ d'application associé au numéro d'accréditation K105. Les certificats de calibrage RvA sont acceptés à l'international et équivalents à ceux de BELAC.

Service Mobile

Outre les laboratoires d'étalonnage fixes de Zaventem et de Capelle aan den IJssel, nous disposons également d'un laboratoire itinérant appelé "Service mobile". Nos services puisse venir vers vous, en offrant une qualité équivalente.

MQS®

MQS® est une formule d'entretien exclusive comportant un entretien et un calibrage périodiques de vos instruments de mesure à un coût fixe et faible. Via un portail Web gratuit (monmqs.be), vous avez toujours accès à vos certificats de calibrage.
