

The cost efficient solution for monitoring your water pipe network

SePem® 352 | 351 with data analysis and visualisation or direct connection to your network information system

Daily updates on your network at a glance - with stationary noise loggers.

Relieve the burden on specialists

Night shifts and time-consuming network inspections are no longer necessary

Maintenance-free operation over the entire battery life:

up to **12** years

Attractive total cost of ownership.

How to work with the smart SePem® 352 | 351 solution

The SePem® 352 | 351 noise loggers detect noises in the drinking water pipe network. They transmit these measurement values via LoRaWAN® on a daily basis. This means changes in the pipe network can be monitored. SePem® 352 | 351 smart solution consists of noise loggers and the SePem® web app. The following is an example of the procedure to follow in the event of a suspected leak:

Even more advantages:

Reports regarding experiences with the SePem® loggers:

- + Highly sensitive piezo microphones with specially optimised frequency responses
- + Easy installation in existing fittings with support of the SePem install app instead of costly installation of measuring zones with range meters
- + Protection class IP68: Suitable for continuous operation – even when constantly under water
- + Transmission of measurement data via LoRaWAN® – a network that you can control yourself
- + Attractive total cost of ownership thanks to up to 12 years battery life and maintenance-free operation of the loggers
- + Full data sovereignty possible
- + Red-Cyber-Security-Act compatible

“I have also tested competitors’ products. In our experience, the SePem® 351 devices work once they are in place. They transmit data reliably and there are no maintenance costs. We know the price from the beginning so I can plan for it and there are no unpleasant surprises.”

Laurent Soubrouillard, leak expert at Veolia Eau Chaumont

How do you want to use the data? It's up to you.

The data from the noise logger is either transferred directly to your network information system or you can use the Sewerin SePem® web app to monitor your water pipe network. Both options are possible.

Choose your device

SePem® 352

LoRaWAN®

- + Up to 12 years battery lifetime
- + Data transfer three times per day
- + CE and FCC certification

SePem® 351

LoRaWAN®

- + Up to 9 years battery lifetime
- + Data transfer once per day
- + CE certification

SePem® install app

Installation is easy. The SePem® install app guides you through the process with step-by-step instructions and a functionality check.

Data analysis and visualisation

The SePem® 352 | 351 solution facilitates your everyday life.

Detecting water leaks

***Supporting the activities of
the leak detection experts***

Keeping an eye on the functionality of the logger

Detecting water leaks

The SePem® web app allows you to analyse and document water leaks and suspected leaks confidently and efficiently. It is the basis for the fast and efficient reduction of water losses.

Minimum level

The adjustable minimum level function gives you a quick overview. If the set level is exceeded, you can recognise this directly on the map.

Leak analysis

This leak detection algorithm reacts adaptively to changes in the network, even with permanent background noise. Short-term disturbances such as heavy rain are suppressed.

Automatic documentation

The system automatically documents the noise level per measurement location. You can also comment on measurement locations.

Clear

The traffic light system makes it easy to interpret the results from each measurement location

Supporting the leak detection experts

You can make this information available to the leak detection experts or use it in other systems for workforce management.

Data export

Export data per measurement location, including the commentary.

Can be connected

This facilitates communication and the work of the leak locator.

Observing functionality

The basic prerequisite for evaluating the data is the certainty that the noise loggers are working reliably. Various aspects can be used to assess whether the noise logger is sending reliable data. Several parameters are continuously monitored.

Battery charge

Radio signal

Recency of last measurement

Transparent

All relevant features for the operational capability of the logger at a glance

Questions? Give us a call.

How do you want to get started in the world of smart water pipe network monitoring? What might a test setup in your water pipe network look like? Let's talk. Our service and sales team will be happy to help you select the right solution for you.

Services d'EURO-INDEX

EURO-INDEX est le fabricant de la gamme LIGNE BLEUE et l'importateur/distributeur de diverses marques A d'instruments de test et de mesure. Nous proposons également un large éventail de services visant à optimiser l'utilisation de ces instruments dans le cadre de vos activités. Cela comprend la maintenance, la réparation et l'étalonnage des instruments, mais aussi le partage de connaissances via l'EURO-INDEX Academy et la location d'instruments.

Centre de Service Agréé

EURO-INDEX est un Centre de Service Agréé pour la plupart des marques de sa gamme. Cela signifie que vos instruments sont pris en charge par des techniciens formés par le fabricant et disposant des outils et logiciels adéquats. Seules des pièces d'origine sont utilisées et la garantie de votre instrument, ainsi que les certifications (ATEX, EN50379, etc.) restent intactes.

Laboratoire d'étalonnage

Notre laboratoire de service et d'étalonnage est accrédité BELAC conformément à la norme EN-ISO/IEC 17025. L'accréditation s'applique aux grandeurs et aux plages de mesure mentionnées dans l'annexe certifiée portant le numéro de certificat [760-CAL](#).

MQS®

MQS® est une formule d'étalonnage pour vos instruments de test et de mesure, comprenant un entretien et un étalonnage périodiques à un coût fixe et avantageux. Vos certificats d'étalonnage sont disponibles au format numérique via Mon MQS (portail web et application gratuits) et en scannant le code QR sur l'autocollant d'étalonnage de l'instrument.

Location d'instruments de mesure

Il existe plusieurs situations dans lesquelles la location est pratique :

- Vous avez temporairement besoin d'appareils supplémentaires.
- Votre propre instrument de mesure est en cours d'entretien et/ou d'étalonnage.
- Vous devez effectuer une mesure occasionnelle.

EURO-INDEX Academy

- Formations, sessions d'informations et workshops
- Vidéos de démonstration et d'instruction
- Notes d'application
